### Clean Spacing

Keep a clean and clear space between the Famoco Logo and any other visual content. You should let a square space on each corner to create a beautiful margin.

### Maintaining Proportion

To provide and maintain an accurate visual identity, you should never modify, rotate, or try to add anything on the Famoco Logo.

Keep to same proportion when you resize the logo, always use "Shift" key while scaling.

### Logo on backgrounds

Use the green Logo on any background that's lighter than 20% black. Otherwise you'll have to use the white Logo on any background that's darker than 20% black.

### Full logo vs text logo

Use text logo when our logo is displayed next to horizontal oriented logos. Use full logo when our logo is displayed next to square shaped logos. Use dark grey text color when other logos around it are filled with dark color.
